## EXECUTIVE SUMMARY

This report presents an annual update on retention, graduation, and transfer activity for students entering Maryland community college as first-time, full-time students, including trend data beginning in 1996. Data presented include student outcomes two, three, and four years after initial enrollment.

In fall 2014, 14,301 students enrolled for the first time as full-time students in Maryland community colleges. After four years, 49.1% of those students had graduated, transferred to a four-year college or university in Maryland, or remained enrolled at a Maryland community college. This success rate represents a 1.9 percentage point increase over that of the fall 2013 cohort. The graduation-transfer rate also increased, from 37.0% to 38.9%. Both of these represent the highest rates on record since the Maryland Higher Education Commission (MHEC) began reporting these data.<sup>1</sup>

In addition to presenting retention, graduation, and transfer rates for first-time, full-time students, this report also includes an analysis using an alternative model of examining student success, the Degree Progress Analysis model. This is a model developed by Maryland's community colleges in 2005 to define a cohort identifying those students whose enrollment behavior suggests that their primary goal in enrolling at the institution is to graduate or transfer. The model also includes part-time students and incorporates additional measures of student success. Of the 18,779 students included in the fall 2013 Degree Progress Analysis cohort, 49.6% had graduated or transferred within four years, a very slight increase (0.1%) in the graduation and transfer rate over that of the fall 2012 cohort.<sup>2</sup>

Throughout this report, the concept of achievement gaps recurs – between racial/ethnic groups, genders, and those of different levels of college readiness. While Maryland's community colleges continue to work to eliminate these gaps, their endurance suggests that work remains to be done.

---

<sup>1</sup> Due to rounding, some figures displayed in the attached data tables may differ slightly from those presented in the report analysis.

<sup>2</sup> Degree Progress Analysis data are based on aggregated and disaggregated figures submitted to the Maryland Higher Education Commission with each community college's Performance Accountability Report (PAR) submissions. Due to reporting cycles, the most recent Degree Progress Analysis data available (from October 2018) are based on the 2013 cohort.

## **INTRODUCTION**

This report provides an update on student retention, graduation, and transfer for first-time, full-time students entering Maryland community colleges. This includes information regarding student outcomes two, three, and four years after initial enrollment at the community college, beginning with students in the 1996 entering cohort. Data are presented for all students, by racial/ethnic group, and by gender. Both longitudinal and year-to-year fluctuations are discussed. More detailed data are contained in the data tables beginning on page 13 of this report.

This report additionally provides an analysis of data from the Degree Progress Analysis, an alternative model of measuring student success at community colleges for a cohort defined by enrollment behavior. These data are also presented longitudinally and by institution in the associated data tables.

## DATA DEFINITIONS

As noted previously, this report utilizes two models of measuring student success: a traditional retention, graduation, and transfer model, and the Degree Progress Analysis model. These use both different cohorts and different measures of success. Table 1 illustrates the parameters defining cohorts for each model as well as associated measures identifying successful outcomes. Taken together they provide a comprehensive look at outcome metrics for community college students.

<b>Table 1: Analysis Cohorts and Successful Outcome Measures</b>	
<b>Analysis Cohort</b>	<b>Successful Outcome Measures</b>
<p><b>Retention, Graduation, and Transfer Cohorts:</b>            Four-year outcomes for first-time, full-time freshmen 2014 entering cohort</p> <p>Begins on page 5 of this report</p>	<ul style="list-style-type: none"> <li>● <u>Still Enrolled</u>: Student was retained at original community college or transferred to another Maryland community college.</li> <li>● <u>Graduated/Did not Transfer</u>: Student graduated from a Maryland community college with an associate degree or lower-division certificate and did not transfer to a Maryland four-year institution.</li> <li>● <u>Transferred to Four-Year</u>: Student transferred to a Maryland four-year institution, with or without a degree or certificate.</li> </ul> <p><i>Note: The Maryland Higher Education Commission does not have the ability to follow students who transfer to out-of-state institutions.</i></p>

**Degree Progress Analysis Cohorts:**

Students who attempted at least 18 credit hours within two years of matriculation 2013 entering cohort

Begins on page 8 of this report.

- College Ready: Student required no remediation or developmental education coursework.
- Developmental Completer: Student was assessed by the community college to need remediation in math, English, and/or reading, and within four years completed all recommended remedial coursework.
- Developmental Non-Completer: Student was assessed by the community college to need remediation in at least one subject area (math, English and/or reading) and after four years had not completed recommended remedial coursework.
- Successful Persister: Student has completed at least 30 credit hours with a GPA of 2.00 or better, has transferred to another Maryland institution, or is still enrolled at their original institution.

*Note: Data are submitted to the Maryland Higher Education Commission by individual institutions and aggregated to produce statewide figures. The Maryland Higher Education Commission does not have the ability to produce these data. Additionally, the Degree Progress Analysis includes information on transfers to out-of-state institutions as obtained by the community colleges from the National Student Clearinghouse and other sources.*

## ANALYSIS

### Four-Year Retention, Graduation, and Transfer Outcomes

#### *All Students*

As Figure 1 illustrates, nearly two-fifths (38.8%) of students entering as first-time, full-time students in the 2014 cohort had graduated or transferred to a Maryland four-year institution within four years, and nearly one-half (49.0%) had either graduated, transferred, or remained still enrolled. In addition to representing slight increases over the success rates of the 2013 cohort (1.9 and 1.8 percentage points, respectively), these are also the highest graduation-transfer and overall success rates since the Maryland Higher Education Commission (MHEC) began reporting these data.<sup>3</sup> All three component rates – the percentage of students who remained enrolled at a Maryland community college, the percentage of students who graduated without transferring to a four-year college or university, and the percentage of students transferring to a four-year institution – increased for the first time since 2002.

<sup>3</sup> For more detailed historical data, please see figures in the data tables beginning on page 13 of this report.

*By Race/Ethnicity*

Figure 2 presents the graduation-transfer rate for students from the four largest racial and ethnic groups. As indicated in the below figure, the rate increased for three of the four groups, with the largest gain (3.8 percentage points) occurring among African American students. This increase means that for the second year in a row, the graduation-transfer rate for African American students is the highest on record. This also represents the fourth consecutive year in which graduation and transfer rates have increased for both white and African American students. Additionally, while a substantial gap between the graduation-transfer rate for African Americans and all students remains (9.2 percentage points among the 2014 entering cohort), this represents a decrease from that of the 2013 cohort (11.1 percentage points).

*By Gender*

Despite several years of narrowing of the achievement gap between men and women, the past three cohort years have seen a return to historic levels. While between the 2005 cohort and the 2011 cohort the gap in graduation and transfer averaged 1.9 percentage points, for the 2012 cohort the gap returned to its highest rate in ten years (4.3 percentage points).<sup>4</sup> While graduation rates for both men and women increased between the 2013 and 2014 cohorts, (from 35.0% to 36.6% and 38.8% to 40.8%, respectively), the slightly larger increase among women meant a small widening of the achievement gap. The continued widening of this achievement gap over the past few years suggests that the gains achieved during the prior decade may have been eliminated.

<sup>4</sup> Additional historical data going back to the 1996 cohort can be found in the tables beginning on page 13.

## **Degree Progress Analysis**

The traditional model of calculating retention and graduation rates defines a cohort as all students entering first-time, full-time within a specified term or year. However, students attend community colleges for a variety of objectives other than obtaining a degree or transferring to a four-year institution, such as seeking personal enrichment or career preparation. In the interest of capturing students for whom graduation or transfer appear to be a priority, Maryland community colleges developed a new model to assess student progress and success. First incorporated into institutions' Performance Accountability Report (PAR) reports in their 2006 submissions, the Degree Progress Analysis (DPA) utilizes a cohort defined by student behavior. Rather than solely examining full-time students, the DPA cohort includes all students who attempt at least 18 credits, including any developmental credits, within two years of initial enrollment at the community college. The DPA analysis for the 2013 cohort included 18,779 students.<sup>5</sup>

Focusing on enrollment behavior is not the only way the DPA differs from MHEC in reporting on retention, graduation, and transfer activity. In addition to reporting these data for an overall student cohort, the DPA further classifies students into one of three groups based on their developmental education needs: College Ready, Developmental Completer, or Developmental Non-Completer. Students who are classified as College Ready are those students identified by the college as prepared to enter directly into credit-bearing coursework. Among those students assessed to need remedial work, Developmental Completers are those students who successfully complete the entire sequence of remedial work to which they were assigned, whereas Developmental Non-Completers failed to have completed some or all of the required developmental sequence.

In addition to defining the cohort in an alternative manner, the DPA also utilizes slightly different outcomes than those captured by the MHEC retention, graduation, and transfer rates. In addition to reporting on graduation and transfer, the DPA reports on "Successful Persisters"; these are students who have transferred to another postsecondary institution, have completed at least 30 credits at their original institution having earned a cumulative grade point average of 2.0 or better, or are still enrolled at their original institution. MHEC does not track students who transfer to out-of-state institutions, and prior to 2014 was unable to track students transferring to in-state, independent institutions. However, because these data are provided to MHEC directly from the community colleges, they are able to utilize information obtained from the National Student Clearinghouse to track out-of-state transfer when reporting DPA.

---

<sup>5</sup> As noted above, DPA data are provided by the institutions as a part of their PAR submissions and are not dependent upon regular MHEC data. Because of the timing of the reporting cycle, the cohort year is one year behind that discussed in the preceding sections; while the prior retention and graduation analyses involved the 2014 entering cohort, the most recent DPA data reflect outcomes for the 2013 cohort.

Figure 4 shows the distribution of the Degree Progress Analysis cohort by the three disaggregated categories used for analysis. This illustrates that only about one-quarter (24.4%) of students in the 2013 DPA cohort were considered ready to enroll directly into college-level, credit-bearing coursework at entry; the remaining three-quarters of students (75.6%) were assessed to need at least some remedial work in math, English, and/or reading prior to enrolling in credit-bearing classes. The majority of those students completed the entire sequence of developmental work to which they were assigned, resulting in 44.4% of the students in the initial cohort being considered Developmental Completers. However, many of those assigned to remedial sequences failed to complete at least one of those courses. As a result, nearly one-third (31.2%) of the 2013 cohort were Developmental Non-Completers.

**Figure 4: Degree Progress Analysis Cohort, Fall 2013**

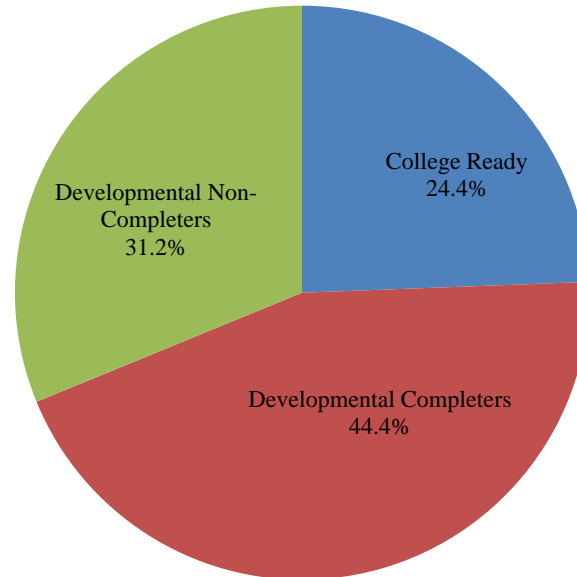

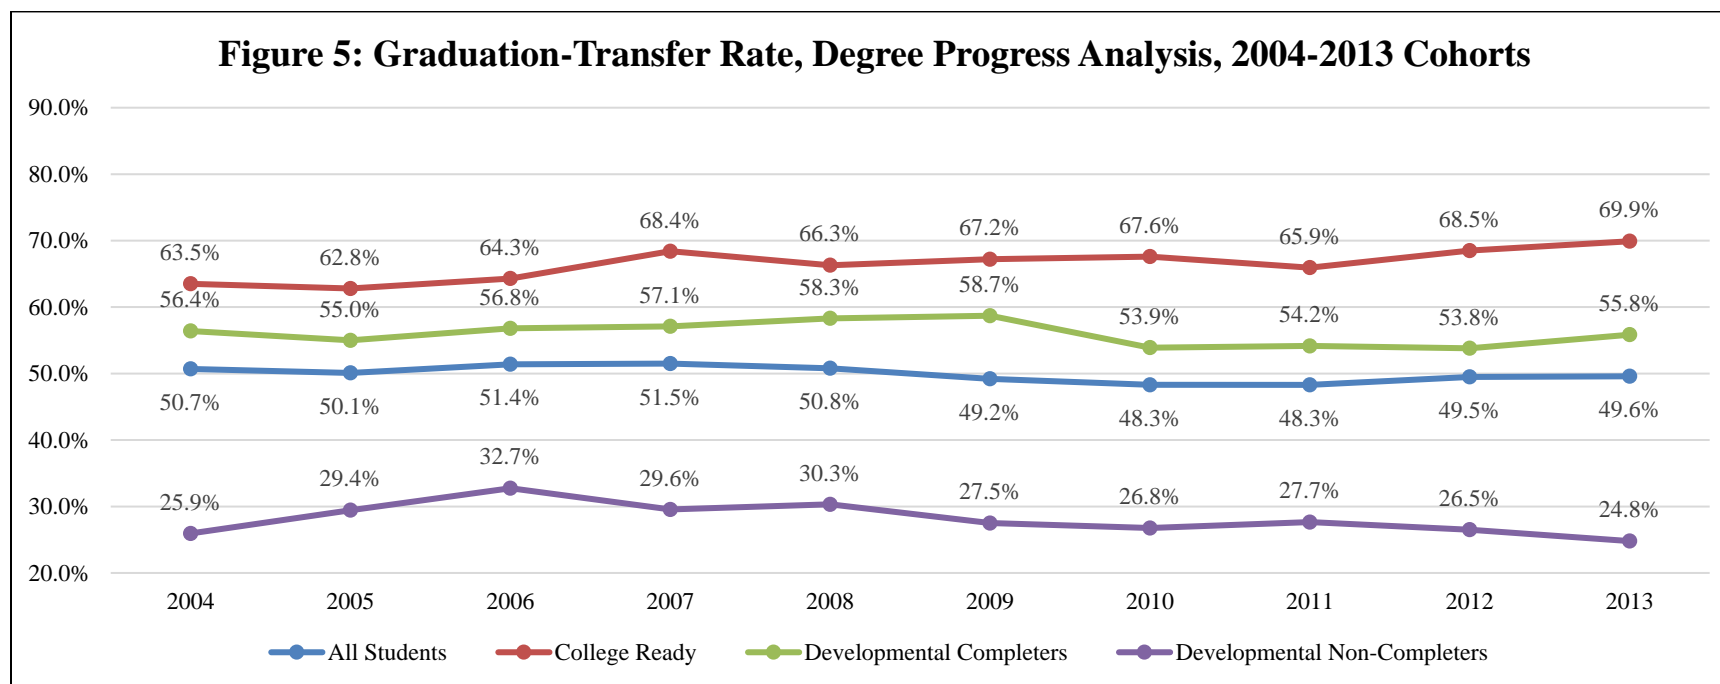

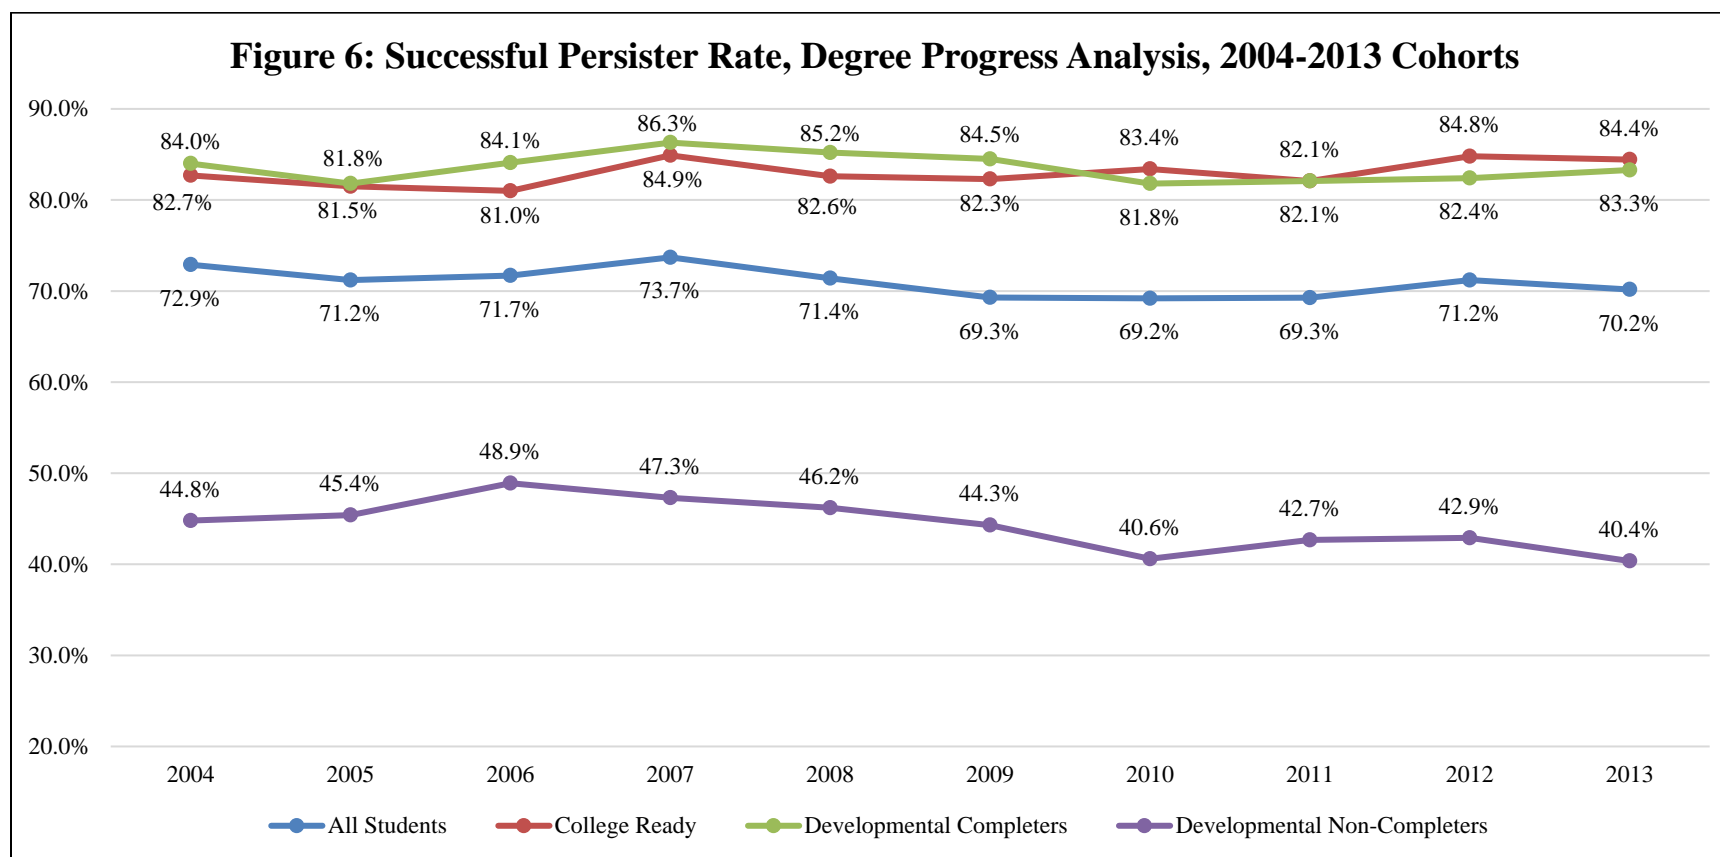

Figure 5 illustrates the DPA graduation-transfer rate for all students as well as the disaggregated rates for students identified as College Ready, Developmental Completers, and Developmental Non-Completers.<sup>6</sup> As the figure shows, the overall graduation and transfer rate for the 2013 cohort remained steady, with nearly half of students (49.6%) graduating or transferring within four years of initial enrollment. However, the stability in this rate for the overall student population masks stark differences between the three developmental categories; while the rates for College Ready students and Developmental Completers increased slightly, the graduation-transfer rate for Developmental Non-Completers declined for the second year in a row. Over two-thirds (69.9%) of College Ready students and over half (55.8%) of Developmental Completers graduated or transferred within four years, while fewer than one-quarter (24.8%) of Developmental Non-Completers did the same. As this shows, while the graduation-transfer rate of Developmental Completers was still substantially lower (14.1 percentage points) than that of College Ready students, the rate for Developmental Non-Completers was nearly one-third of the rate for College Ready students. This represents a substantial – and persistent – achievement gap.

<sup>6</sup> See Table 1 on pages 3 and 4 for more detailed definitions of College Ready, Developmental Completers, and Developmental Non-Completers; these terms were defined by the community colleges in the creation of the DPA model.

An even more pronounced difference between the Developmental Completer and Developmental Non-Completer populations is evident when examining the Successful Persister rate, as Figure 6 shows. Over four-fifths of students in both the College Ready (84.4%) and Developmental Completer (83.3%) populations had transferred to another institution, completed at least 30 credits with a GPA of 2.00 or higher, or remained still enrolled after four years. The achievement gap between these two groups was only 1.1 percentage points. However, among Developmental Non-Completers, less than half (40.4%) had achieved the same outcomes.

The data contained in the Degree Progress Analysis show stark differences in outcomes among the College Ready, Developmental Completer, and Developmental Non-Completer student populations. While Developmental Completers remain substantially less likely to have graduated or transferred within four years than College Ready students, their graduation/transfer rate was more than double that of students who were assessed to need one or more remedial courses and did not complete them. Further, students who were

assessed to need and completed remedial coursework were successful at rates nearly identical to those of students entering college ready to enroll directly in credit-bearing courses. While there are likely a number of differences between students who are assessed to need remediation and complete it versus those who do not, these data suggest that the main barrier to success for these students may not be the assignment to developmental work, but other factors.

## CONCLUSION

For the second year in a row, the 2014 cohort achieved the highest graduation and transfer rate since MHEC began reporting these data. In addition to having the highest graduation and transfer rate during that time, the entering cohort of 2014 also had the highest overall success rate on record. Despite these increases in graduation and transfer rates as well as overall success rates, there continue to be persistent achievement gaps among racial/ethnic groups and between genders. While graduation and transfer rates for both men and women increased, the larger increase in the rate for women meant a widening of the gender gap. Additionally, while the graduation and transfer rate for African Americans reached its highest figure on record, the rate is still well below those of all students. Much work remains to ensure the elimination of these gaps.

Examining graduation and transfer outcomes using the Degree Progress Analysis model shows a very slight increase over the prior cohort. However, there continue to be substantial achievement gaps in terms of both graduation-transfer rates and overall success between populations identified by their degree of college readiness. It is important that institutions continue to evaluate the efficacy of their developmental sequences to identify best practices to encourage student success.

Community colleges continue to play a critical role in ensuring that Maryland reaches its goal of having 55% of residents hold an associate degree or higher by 2025. In addition, they continue to play a key role in preparing students for employment and ensuring the continuation of a highly-educated workforce.

**Notes:**

Successful Persister is defined as students who completed at least 30 credit hours with a GPA of 2.00 or better, who have graduated and/or transferred, or who are still enrolled at the institution

Totals reflect summation of cohort data as reported by the colleges, and derived percentages based solely on the reporting institutions. These may provide an "indication" or estimate of the statewide community college success levels, but should not be relied upon as a completely accurate measure at the statewide level.
